

RAGHUPAL – RNZ LQ

Features

Raghupal RNZ Liquid is a tetrasulfo-type Fluorescent Whitening agent (FWA) for paper. It has broad spectrum of application, good general properties and is largely unaffected by ph.

Properties

Chemical Constitution	-	Stilbene Disulphonic Acid derivative
Ionic Nature	-	Anionic
Appearance	-	Yellowish to Reddish brown Clear Liquid.
Shade	-	Bluish to neutral white in all applications. It only has tendency to produce a greenish hue if too large amount are used.

Storage Stability

Raghupal RNZ Liquid is shows a high level of stability in storage and cold temperatures prolonged storage in temperature below 0°C can result in product freezing. Frozen product can be restored to its original state without loss of effectiveness by leaving to stand at Room temperature OR heating briefly to temperature no higher than 60°C.

Fastness

The product's light Fastness and stability to acid and alkalis are comparable to those of other Fluorescent Whitening agents with the same chemical constitution.
